Alonzo et al:

Please remember that any tanks that have holes in them that would have allowed oil, sludge, or water to be released to the ground surface require that the floors be removed and the soils beneath the tanks to be remediated prior to final repair of the tanks. If these tanks can be temporarily repaired for use for the cleanup action that is acceptable if such repairs are sufficient to prevent a failure of the tank during the course of the cleanup action. I need a listing of the tanks where the soil below the tanks needs to be evaluated for cleanup.

Thanks
